“I’m very happy with how flexible the team was with our requirements; we had a lot of redesign done to the plan from the start to install, yet you guys were flexible and made it possible”

**Laurie Mills
Business Manager**

Based in Milton Keynes, Great Linford Primary School serves approximately 300 students from foundation stage to year 6. The school works tirelessly to refine the nurturing environment it has built for its students, and as part of these efforts, decided it was time to upgrade its pupil storage facilities.

Like many primary schools, Great Linford had been relying on coat hook areas to store pupil belongings. Unfortunately, the mess caused by fallen clothes, bags and other items was not only using up valuable space but also leading to an excessive amount of lost property. After seeing the positive impact of our Atlas Lockers at another local primary school, Great Linford

approached us to replace their outdated coat hooks with steel lockers.

In a primary school setting, standard height 1800mm lockers are generally unsuitable for younger years, while a mix of different locker units, each serving a separate age group, can spoil the overall look of the school. Instead, Great Linford required a flexible solution, capable of delivering appropriate storage to every student across the year groups, but without sacrificing a uniform finish.

On top of this, the staff at Great Linford were hoping to avoid a complex key management operation. The lockers needed to fasten, in

order to keep contents cleared away, but as in many primary schools, security was not a concern.

Our free survey and expert guidance helped Great Linford settle on the perfect solution: our Atlas Lockers are available in a range of different heights to suit children of all age groups. We were therefore able to provide both 943mm and 1372mm custom height lockers to ensure all pupils can access their belongings with ease.

Atlas Lockers can also be fitted with swivel catches that will fasten without being locked, which enabled Great Linford to go entirely keyless. Swivel catches are used in a similar fashion to a regular twisting door knob, only they can be secured with a padlock if necessary - ideal for younger students. As well as providing flexibility, our lockers

boast a number of innovative features that ensure exceptional durability. On many budget lockers, steel doors can be easily bent out of shape or otherwise damaged; however, each Atlas Locker door is reinforced by a full-height steel bar and corner stiffeners to combat this issue. If damage does occur, a unique mechanism allows any door to be replaced with nothing more than a soft mallet.

All in all, Great Linford Primary School are extremely pleased with the result, awarding their overall experience with us 5 stars. Storage areas are now tidier and more efficient, with a much reduced risk of lost property, and the modern, functional design of our Atlas Lockers, finished in the school colours of green and yellow, has dramatically improved the environment for students, staff and visitors alike.
