

SUCCESS STORIES: HEALD PLACE PRIMARY SCHOOL

Situated roughly 2 miles from the centre of Manchester, Heald Place is a successful primary school serving around 650 students. Due to its Victorian red-brick architecture, the school building features many relatively narrow corridors lined with traditional cloakroom hangers to provide students with personal storage.

During a routine health and safety inspection, Heald Place were advised that replacing hangers with lockers could reduce their risk in the event of a fire. The school acted immediately, approaching us after a glowing recommendation from nearby [Wilbraham Primary School](#), whom we helped with a similar issue.

Heald Place were particularly impressed by the quality of our Atlas Steel Lockers and the superb range of colours available for this range. In total, we supplied 130, 3 door, custom height Atlas lockers (1372mm high, to better suit younger students) with custom colour doors in blue, yellow and red. These vibrant colours not only matched the school's own, but also reinforced the fun and positive atmosphere that they have worked hard to cultivate.

BEFORE

AFTER

The installation process was complicated by a series of buttresses that juttured out along the corridor, providing no flat wall against which the lockers could be placed. However, our expert team crafted a bespoke solution that ensured the lockers were uniform and centralised against the buttresses, delivering a unique and attractive storage solution.

To stop dust and rubbish gathering behind the units, and to ensure a superior finish, we also filled any gaps with timber sheets painted to match the colour of the surrounding window frame.

“The installation was excellent, the install team were very detailed at installing the lockers and made sure they were centralised.”
