

TO

Stanton School is a local primary school in Milton Keynes serving around 260 students from years 3-6. The school has seen a string of recent successes, earning a prestigious Association for Physical Education award and achieving 3rd place in the Sports Leaders UK awards. With continuing success and ever-increasing pupil numbers, Stanton School decided it was time to tackle a less glamorous issue: its pupil storage facilities.

The school had traditionally relied on coat pegs and benches, as is common in primary schools across the country, but as pupil numbers swelled, some were left without a peg of their own. The result was an unsightly mess of fallen bags and coats, with pupils losing their personal belongings in the confusion.

Stanton School began to investigate the possibility of installing lockers, both to clear up the mess and to provide students with the responsibility of managing their own private space. The lockers needed to fit the school's clean, modern environment and match the school colours, preferably in blue. Due to the age group, security was not a concern, and a complicated key management operation would only take up staff time.

One final issue was the height of the lockers: standard school lockers are around 1800mm high, which the school worried might make them inaccessible to younger students. A lack of assurance could have hindered the decision making process.

After receiving quotes from a number of suppliers, Stanton School chose us to deliver their brand new lockers. Our own Atlas Steel Lockers matched all their criteria at a competitive price, and the school felt confident that we could deliver a superior service. On top of this, we offered to provide a sample 1800mm locker to ensure that students could reach their belongings comfortably, which our competitors could not match.

Atlas Steel Lockers are available in a range of striking colours, including a deep, clear blue that was perfectly suited to Stanton School. The lockers also have a sleek and simple design that works well in any modern environment. On top of this, where security is not an issue, such as in primary schools, our lockers are available with swivel catches that will keep the doors firmly shut without the need for a lock, so you can avoid the hassle of key management.

As well as these standard features, Stanton School took advantage of our optional sloping tops, which guarantee that each locker top remains clear and tidy, making life a little easier for the cleaners.

Though the school opted to install the lockers themselves, we worked with them closely to ensure everything went smoothly. Our experts met with the school's carpenter to pore through the details of the installation, and our delivery team helped move the lockers into place on the 1st floor.

Stanton School were delighted with the results, marking their overall experience with us 5 stars. The school now looks a lot tidier, with stacks of coats and bags cleared away, and there is plenty of room for everyone's belongings. Best of all, the school has found that students are finding the necessary items much more quickly, which means less time wasted in the corridors and more time spent in class or out playing sports.

"Working with Action Storage was smooth from the outset. I was very comfortable working with the team and the delivery team even helped to move the lockers upstairs, ever so helpful"
